

Dual display configuration – low resolution problem

Screen #02 : 3440 x 1440

The display of the Copernic Window is always in low resolution on the second screen, whatever the performances of the second monitor (4k / 1920 x / 3440 x...)

The resolution of any other application fits perfectly the resolution expected.

Ex hereafter : resolution of Copernic App (kind of 1280 x 768) vs resolution of Copernic website (3440 x 1440)

Laptop 4k (3840 x 2120) – Screen 1

Ex hereafter : resolution of Copernic App vs resolution of Copernic website. The result is coherent (4k here)
